

# RECON BLOCKAGE

## Wireless Blockage & Flow Monitor

Seed Right the First Time

### HEAR THE PROBLEM

Acoustic sensors function like a stethoscope, resulting in a more durable solution for real seeding conditions.

### SEE THE PROBLEM

Using the easy iPad app, get a clear, complete view of your implement's performance.

The Recon Wireless Blockage and Flow Monitor provides reliable, versatile machine monitoring technology to improve precision in every pass. Unlike traditional optical sensors, our patented acoustic sensors monitor the sound of the seed flow so you can depend on accurate readings even if the sensors get dusty.

The system is easy-to-install and can adapt to nearly any brand of equipment for a variety of applications. Its software is compatible with your iPad to provide a simple, user-friendly interface that displays all manifold runs and gives you an audible alert if a run becomes blocked.

## FREE IPAD!

With purchase of a full system.
